

Use Sunblock Year-Round!

While the heat of summer may be waning, the sun still threatens your skin. Therefore everyone, no matter what season, should protect their skin from the sun's damaging rays with sunblock. However, what's in your sunblock may also be harmful.

Daily Protection is Essential

Today, more information is available than ever before about protecting your skin. Consequently the general public is aware of the health threats of the sun because of ozone depletion. Ozone is naturally occurring gas in the atmosphere, and helps protect all living things from the sun's deadly radiation. In fact, without ozone no life could survive.

In recent years, scientists have discovered that the ozone layer is thinning. As a result, our protection from the sun's harmful ultraviolet (UV) rays has decreased. The incidence of skin cancer around the world has reached epidemic proportions. Accordingly, it is vital that you provide your skin with "broad-spectrum" protection against both UVA and UVB rays.

Not All Sunblocks Are Equal

Your choice of protection is essential because not all sunblocks are alike. The Environmental Working Group (EWG) found widespread evidence that many products on the market are not safe and effective, and that many high-SPF sunscreens do not protect from UVA radiation. UVA is the wavelength of sunlight that penetrates deeper into the skin without causing surface burning, but instead has the potential to release free radicals and cause skin melanomas,

photoaging and more.

Additionally, the FDA has not established rigorous safety standards for sunscreen ingredients. Many of the common sunscreen ingredients are suspected or known carcinogens and/or hormone disruptors. Some sunscreen ingredients release skin-damaging free radicals in sunlight, some act like estrogen and could disrupt hormone systems, several are strongly linked to allergic reactions, and still others may build up in the body or the environment.

Natural Alternatives

At SANRE, we are committed to naturally protecting you and your skin! SANRE's sun protection system utilizes natural Zinc Oxide, a mineral derived from clay, that acts as a formidable "Physical Barrier Sunscreen", which actually reflects and scatters UV light away from your skin. Zinc Oxide provides strong and natural UVB/UVA protection, has anti-inflammatory properties and is considered a safe sunscreen ingredient. Health and environmental organizations, such as the FDA and "The Green Guide" acknowledge the safety and protection of zinc oxide in mineral sunblocks.

SANRE Organic Skin Food offers wonderful, broad-spectrum SPF-30 sun protection products including: Face Creams, Body Moisturizers, Hand Moisturizers, Lip Care, and an Eye Formula. These pampering products, as with all SANRE offerings, utilize only beneficial organic ingredients and essential oils to lavish, hydrate and replenish your vital skin. For more information about organic skin care and all SANRE products log onto www.SanReOrganic.com. 1-877-755-0203

SANRE

ORGANIC SKINFOOD

SanRe exemplifies natural beauty! **SanRe** utilizes certified organic ingredients; being potent, highly vital and filled with nutrients, anti-oxidants and vitamins that will literally FEED YOUR SKIN. There is no artificial/harsh heating that breaks down vital, nourishing properties of the organic ingredients. Infused ingredients are only gently warmed with radiant sunshine!

Just as we are learning to protect and nurture mother earth, **SanRe** encourages you to take the loving steps necessary to nurture and protect your very own beautiful "vessel" – your skin. **SanRe** products contain no parabens, no sodium laurel sulfates, no petrochemicals, no artificial fragrances, no artificial colors, no pesticides and no herbicides.
