

FOR IMMEDIATE RELEASE

EWG Names Sanre Organic Skinfood One of Best Moisturizers with SPF

The 2009 Environmental Working Group's (EWG) Sunscreen consumer guide investigated 1,572 sunscreens, lip balms and daily moisturizers, declaring **SanRe Organic Skinfood's Supple Sunshine** to be the 5th best Moisturizer with SPF.

EWG's highest rated moisturizers contain zinc oxide, a mineral derived from clay, that acts as a formidable "Physical Barrier Sunscreen", which actually reflects and scatters UV light away from your skin. Zinc oxide provides broad UVB/UVA protection, has anti-inflammatory properties and is considered a safe sunscreen ingredient that doesn't break down.

EWG's consumer guide also highly stressed the purity of moisturizer ingredients, shunning products containing hazardous chemicals. Seeing its effectiveness and natural ingredients, the EWG recognized SanRe's *Supple Sunshine* (SPF 30) among the very best.

Hundreds of all-day moisturizers advertise SPF protection, but 1 in 5 provides poor shielding from harmful UVA rays or breaks down in UV radiation. This is important inside and out, as a new review by FDA scientists attributes an increasing incidence of malignant melanoma among people who work indoors to UVA rays shining through windows onto unprotected skin (Godar 2009).

Sanre is committed to organic conscious customers focused on natural and safe beauty. Our pampering products utilize beneficial organic ingredients and essential oils to lavish, hydrate, replenish and protect your vital skin. SanRe is environmentally conscious, subjects no animals to testing, and does not use nano particles. Please visit us at <http://www.Sanreorganic.com> for further information. Your skin will thank you!

SANRE welcomes you to Natural Beauty.
